

Apex Global Logistics

Global fulfillment and cross-dock logistics network for enterprise e-commerce clients.

APEX

Operational Summary

Apex Global Logistics operates a network of 42 fulfillment and cross-dock facilities across North America and Europe, processing over 3.2 million parcels daily on behalf of enterprise e-commerce clients. The network combines high-volume regional hubs with smaller cross-dock sites optimized for last-mile handoff, and is undergoing a multi-year modernization of its inbound receiving and quality-inspection workflows.

Business Pain Points

- Facility bottlenecks during peak season cause dock-to-stock delays averaging 6.4 hours.
- Manual barcode rescans due to damaged or misaligned labels cost approximately \$4.80 per parcel in added labor.
- Inbound quality inspection is fully manual across 60% of facilities, creating inconsistent defect capture between sites.
- Limited real-time visibility into shelf and dock congestion keeps staffing reactive rather than predictive.

Facility Metrics

Rescan-cost figures below are estimated from Q2 2026 labor and throughput data across our four highest-volume facilities.

Facility	Region	Daily Volume (parcels)	Manual Rescan Rate	Est. Annual Rescan Cos
Chicago Hub	Midwest US	210,000	7.8%	\$2.94M
Rotterdam DC	EU-West	165,000	9.1%	\$2.63M
Dallas Fulfillment	South US	190,000	6.4%	\$2.20M
Leipzig Cross-Dock	EU-Central	140,000	8.5%	\$1.83M

2026 Digital Transformation Priorities

Apex Global Logistics has allocated budget in fiscal year 2026 to modernize inbound receiving, with a stated priority on reducing manual rescan labor and improving predictive visibility into facility congestion. Leadership has expressed openness to automated visual inspection and analytics tooling that can integrate with existing warehouse management systems without a full infrastructure overhaul.

Procurement Contact

Vendor evaluations for this initiative are being coordinated through the Apex Global Logistics Operations Technology team, with a target vendor shortlist by the end of Q3 2026.
